Raytheon Beechcraft 1900C Airliner

The Raytheon Beechcraft 1900C, similar to its 1900D stablemate is a 19-passenger, pressurised twin-engine turboprop aircraft. Capable of transporting 19 passengers or cargo up to 1200nm. As part of the 1900 family, it shares in its short runway performance, speed and high useful load. The 1900C excels in both short haul passenger transport and cargo uplift. Well suited to Australian conditions, the 1900C is the workhorse you need.

Our 1900C is fitted with an oversize cargo door allowing the transport of items other operators reject. Although usually fitted with 19 passenger seats, this aircraft can be quickly reconfigured to carry cargo, taking advantage of the 1900C's extraordinary uplift capability.

Beech 1900C Aircraft Specifications

Crew – 2
Max Passenger Capacity: 19 Passengers
Cruise Speed: 240 knots (440 kmh)
Max Range: 900nm (1,700 km)
Max Takeoff Weight: 7,530 kg
Useful Load: 1,700 kg
Maximum Cruising Altitude: 25,000 feet
